

ADRIAN E. RADILLO, PH.D.

+1(469) 662-7982 ◇ Santa Teresa, NM

adrian.radillo@protonmail.com ◇ [LinkedIn](#) ◇ [GitHub](#) ◇ adrianradillo.org

Senior Data Scientist and ML Engineer with over 5 years of enterprise experience deploying models into production environments and architecting end-to-end applications. Expertise spans genAI, predictive modeling, and full-stack web architecture (Python, FastAPI, NextJS, Linux VPS). Proven ability to lead cross-functional offshore engineering teams and drive complex system modeling. Seeking a Senior Data Scientist or ML Engineering role to bring enterprise systems up to date with modern AI technology.

TECHNICAL SKILLS

Languages	Python (Advanced), JavaScript/TypeScript, SQL, R.
Backend & Infrastructure	Linux Server Administration, Apache Service Management, Virtual Private Servers (VPS), FastAPI, Git, CI/CD pipelines.
Frontend	NextJS, React, Modern Web App Architecture.
Data Science & AI	Bayesian Decision Theory, RAG, BERT.
Leadership	Agile Project Management, Offshore Team Leadership, Cross-Functional Technical Direction.

PROFESSIONAL EXPERIENCE

Independent Software Developer & Researcher
Self-Employed

2026 - Present
Santa Teresa, NM

- Building a full-stack Knowledge Management and Debating web application (Vercel frontend and a Linux VPS backend).
- Engineered the backend using FastAPI and Python, ensuring low-latency data retrieval (PostgreSQL caching) and robust API integration.
- Developed the highly responsive frontend using NextJS and modern TypeScript frameworks.
- Managed end-to-end infrastructure, including server provisioning, multi-domain management, network security, and database architecture.
- Released the FOSS components of this project (indiek.org), including a new knowledge graph data archival format.
- Participating in the ARC-AGI-3 kaggle competition ([leaderboard](#))

AI Data Scientist
Chubb (*insurance*)

2020 - 2025
Philadelphia, PA

- Helped engineer and deploy a BERT-based webtext classification system that drove a 5% accuracy gain, while simultaneously prototyping a RAG solution for semantic search across 1,000+ PDFs, optimized to maintain a <5-second latency.
- Developed and maintained a Django web app for human labeling of webtext. The collected labels were used to fine-tune the BERT model used in production. The system saved hundreds of hours of underwriting time to the company for several years.
- Designed and developed a Root-Cause Analysis module for KPI timeseries anomalies relying on XGBoost and SHAPley values, thereby providing Business Units with actionable insights on their portfolio.
- Setup the job and tracking infrastructure on Databricks and MLFLow to run experiments for a high-impact Operations Research project around pricing. Setup the CI pipeline for IT handoff.
- 2+ years of heavy cross-functional communication with UI, Business stakeholders, and IT teams to deliver two high-impact analytics products into production, while securing Business and leadership buy-in. The total company budget for both projects was around USD 30M.
- 4+ years of end-to-end predictive model building for the insurance industry (GLMs, XGBoost).

Mathematics Educator
French Agricultural High School

Late 2025 - Early 2026
France

- Instructed secondary students in foundational and advanced mathematics during a 6-month, purpose-driven teaching engagement.

Postdoctoral Researcher
University of Pennsylvania

2018 - 2020
Philadelphia, PA

- Designed and ran a human [Psychophysics experiment](#) investigating temporal information filtering in perceptual decision making.

EDUCATION

Ph.D. Mathematics, University of Houston 2014 - 2018
Dissertation: Optimal decision making models in changing environments ([pdf](#))

B.Sc. Mathematics, University of Warwick 2011 - 2014

M.A. Clinical Psychology, Ecole de Psychologues Practiciens 2004 - 2009
